## 0.1 LyX Chinese environment

<https://latexlyx.blogspot.com/2012/06/lyx.html>

2014年09月21日 晚上10:58

匿名：Language 那邊改成 Chinese Traditional 之後，Definition 就變成定義，Example 就變成範例，有沒有辦法維持他們是英文的？

2014年09月22日 上午11:23

Mingyi Wu：這個是 LyX 的特性之一。UI 的語言設定，與編輯區的語言是分開的。就算 UI 設定為 English，如果檔案語言設定為 Chinese，那麼編輯區出現的一些如 Chapter, Section, Definition 等名稱，會自動變成中文。也就是說檔案的語言設定值，會影響 LyX 文字編輯區內呈現的語言。若使用數學模組或一些數學論文 document class 的時候，甚至連輸出的檔案內容都會根據語言設定而變。(也就是 Definition 變成 定義)

所以您說的狀況，可能有2種情況：

1. Definition 在 LyX 編輯區內變成中文，但輸出檔案時檔案還是出現 Definition 這個只是編輯區呈現的問題，沒辦法只改一部份。如果真的希望檔案設定成中文，但所有介面看起來都要是英文的環境，您可以直接刪掉中文翻譯檔，這樣所有介面都會變成英文的。以我的環境，繁體中文的翻譯檔路徑在(for Windows): C:\Program Files (x86)\LyX 2.1\Resources\locale\zh-TW\LC\_MESSAGES\LyX2.1.mo 把這個檔名改掉，這樣 LyX 就找不到中文翻譯檔，都會以預設的英文呈現。

2. 如果您的問題是輸出的檔案會出現中文的「定義」問題，不管介面顯示。這個問題跟另外一個檔案有關，C:\Program Files (x86)\LyX 2.1\Resources\layouttranslations 您可以用任何文字編輯器開啟此檔，找到 Translation zh-TW 這行以下的設定改成您喜歡的，或是直接把這個檔名改掉或刪掉檔案，這樣輸出檔案也不會自動翻譯了。

### 0.4.1 single coloring

```
\def\zl{ {\color{blue} z_{\scriptscriptstyle l}} }
```

also can be put into “preamble”

$$0 = \frac{\partial}{\partial z_l} (\|h(z_{l-1}) \cdot w_l - z_l\| + \lambda \|h(z_l) \cdot w_{l+1} - z_{l+1}\|)$$

## 0.4.2 recolor = coloring with regular expression (= RegEx = re)

<https://tex.stackexchange.com/questions/83101/option-clash-for-package-xcolor>

Now, the problem was that another package (pgfplots, in this case) had already loaded the xcolor package without options, so loading it after pgfplots with the table option produces the clash. One way to prevent the problem was already presented (using table as class option); another solution is to load xcolor with the table option before pgfplots
